

Tariff – Find A Tariff

The “Tariff - Find a Tariff” lets allows you view tariff rates by selecting from one data source, one market, one year, and one or all duty codes.
This tool is useful for determining tariff rates at the national level, as well as for comparing rates applied to various trade agreements.
In this example, we will look at the tariff rates applied by Indonesia for its export of roasted, unground coffee.
Select the Data Source, Market, Year, Duty Code, Nomenclature, and Tier.
For Product, you can either input “coffee” or the product code.
For Tariff Line, select the national level classification for the coffee product.
Select the attributes to be displayed in your report, then click “Proceed” when you are done.
In the Result View window, we can see the tariff rates applied by Indonesia for roasted, unground coffee.
We have the MFN duty rate
as well as the preferential tariff rates for individual partners.
There is also a tariff rate for countries belonging to the ASEAN group
To determine the member countries, take the Partner code.
Go to “TRAINS Tariff Measures and Preference Beneficiaries”, and input the same code in the “Region Code” filter.
These are the countries that are included in that trade agreement.
To download your report, click on the Download button.
Enter the Job Name, Job Description, and select the file format.
Your report will be displayed once it is available for downloading.
Click on the “Save” icon to download your report to your personal drive.
