

Quick Search > NTM - View and Export Raw Data

<p>The “NTM – View and Export Raw Data” tool lets you query the TRAINS database to retrieve data on non-tariff measures.</p>
<p>Before we proceed, it is important to note that information on NTMs can be outdated and only partially reported, and should therefore be used with caution.</p>
<p>In this example we will look at the latest available data on Egypt’s NTMs, and we will use the “Filter” function of the report to execute a targeted search.</p>
<p>The first step is to check the TRAINS NTM catalog by clicking on this link.</p>
<p>Here we can see the latest available data for Egypt, as well as the classification of the measures contained in the report.</p>
<p>Go back to the search tool and input your Reporter and Year.</p>
<p>For NTM measures, you can choose to use a specific category, or select “All NTB Measure Codes”</p>
<p>For Products, you can search by level of aggregation, search for specific products, or select “All Products”</p>
<p>Click “View Report” when you are done selecting.</p>
<p>In the Report Columns Selection window, you can choose the attributes to include in your report.</p>
<p>When you click on an attribute, a short description will be shown.</p>
<p>Click “Proceed” when you are ready to view your report.</p>
<p>In the Result View window you can see the list of Non-Tariff Measures, the countries or regions affected, and the rest of the attributes you previously selected.</p>
<p>You can use the Filter to narrow down your search.</p>
<p>If you wish to download your report, click on the “Download” button.</p>
<p>Enter the Job Name and Description, select the File Format, and then click “Download”.</p>
<p>You will be redirected to the “Download and View Results” page where your report will be available once it has been processed.</p>
<p>Click on the “Save” icon to download your report to your personal drive.</p>
