

Tariff – View and Export Raw Data

The "Tariff - View and Export Raw Data" tool lets you query available databases and retrieve duties applied to all countries.
This tool is also useful for comparing rates of various trade agreements.
In this example, we will look at all the duty codes for Vietnam in 2014 using the "TRAINS-Raw Data" database.
Select the Data Source, Market, Year, and Duty Code.
Select the attributes you want to display in your report, then click "Proceed" once you are finished.
In the Result View window, you can see the different duties applied by Vietnam.
You can use the Product Code filter to compare duties on a single product
In this example we can see the MFN duty rate, the Non-MFN duty rate, as well as the individual preferential trade agreements.
There is also a tariff for country groups, which applies to its member countries.
To identify the member countries, copy the Partner code, go to Support Materials, select "TRAINS Tariff Measures and Preference Beneficiaries", and then type it in the Region Code filter.
These are the countries included in that trade agreement.
To download your report, click on the "Download" button.
Enter the Job Name, Job Description, and select the file format.
Your report will be displayed once it is ready to be downloaded.
Click on the "Save" icon to download your report to your personal drive.
