

## Tariff Profiles/Indicators

The Tariff Profiles tool lets you quickly access MFN Applied tariff rates and associated import statistics in the UNCTAD TRAINS database.
You can use this tool to view various tariff indicators such as simple and weighted tariff averages, number of tariff peaks, as well as information on tariff lines with MFN duty-free, dutiable and non-Ad Valorem rates with corresponding import values.
To get started, simply select 1 or more countries as your reporters.
Select 1 or more years.
Then select 1 or more products from the available product groups.
Click View Report when you are done.
In the Report Columns Selection window, you can choose which attributes to include or omit from your report.
A short description will be shown when you highlight a variable.
Click "Proceed" when you have finalized your selections.
In the Result View window, you will find a detailed breakdown of your report.
You can refer to the WITS online Help document for more information on the variables in your report.
To download your report, simply click on the download button.
Enter the Job Name, Job Description, and select the File Format.
You will be redirected to the Download and View Results page, where you can check on the status of your report.
When your report is ready, click on the "Save" icon to download it to your personal drive.
If you wish to execute a more complex query involving multiple tariff rates, please use the Tariff and Trade Analysis tool.
Thank you for watching.
